

“Home Beacon

Designed for indoor location via BLE connection between the device and beacon.

The beacon is a tiny wireless device broadcasting BLE signal 24/7.

62mm (diameter)*17.3mm

Top

Bottom

HOW DOES IT WORK?

The device will scan the beacons around and capture the one with the strongest signal to confirm where it is.

Then it will send location information (for example Living room, bathroom, kitchen etc) to your mobile phone via text message or to the server via data.

The user can check the location on the APP, platform and by SMS.

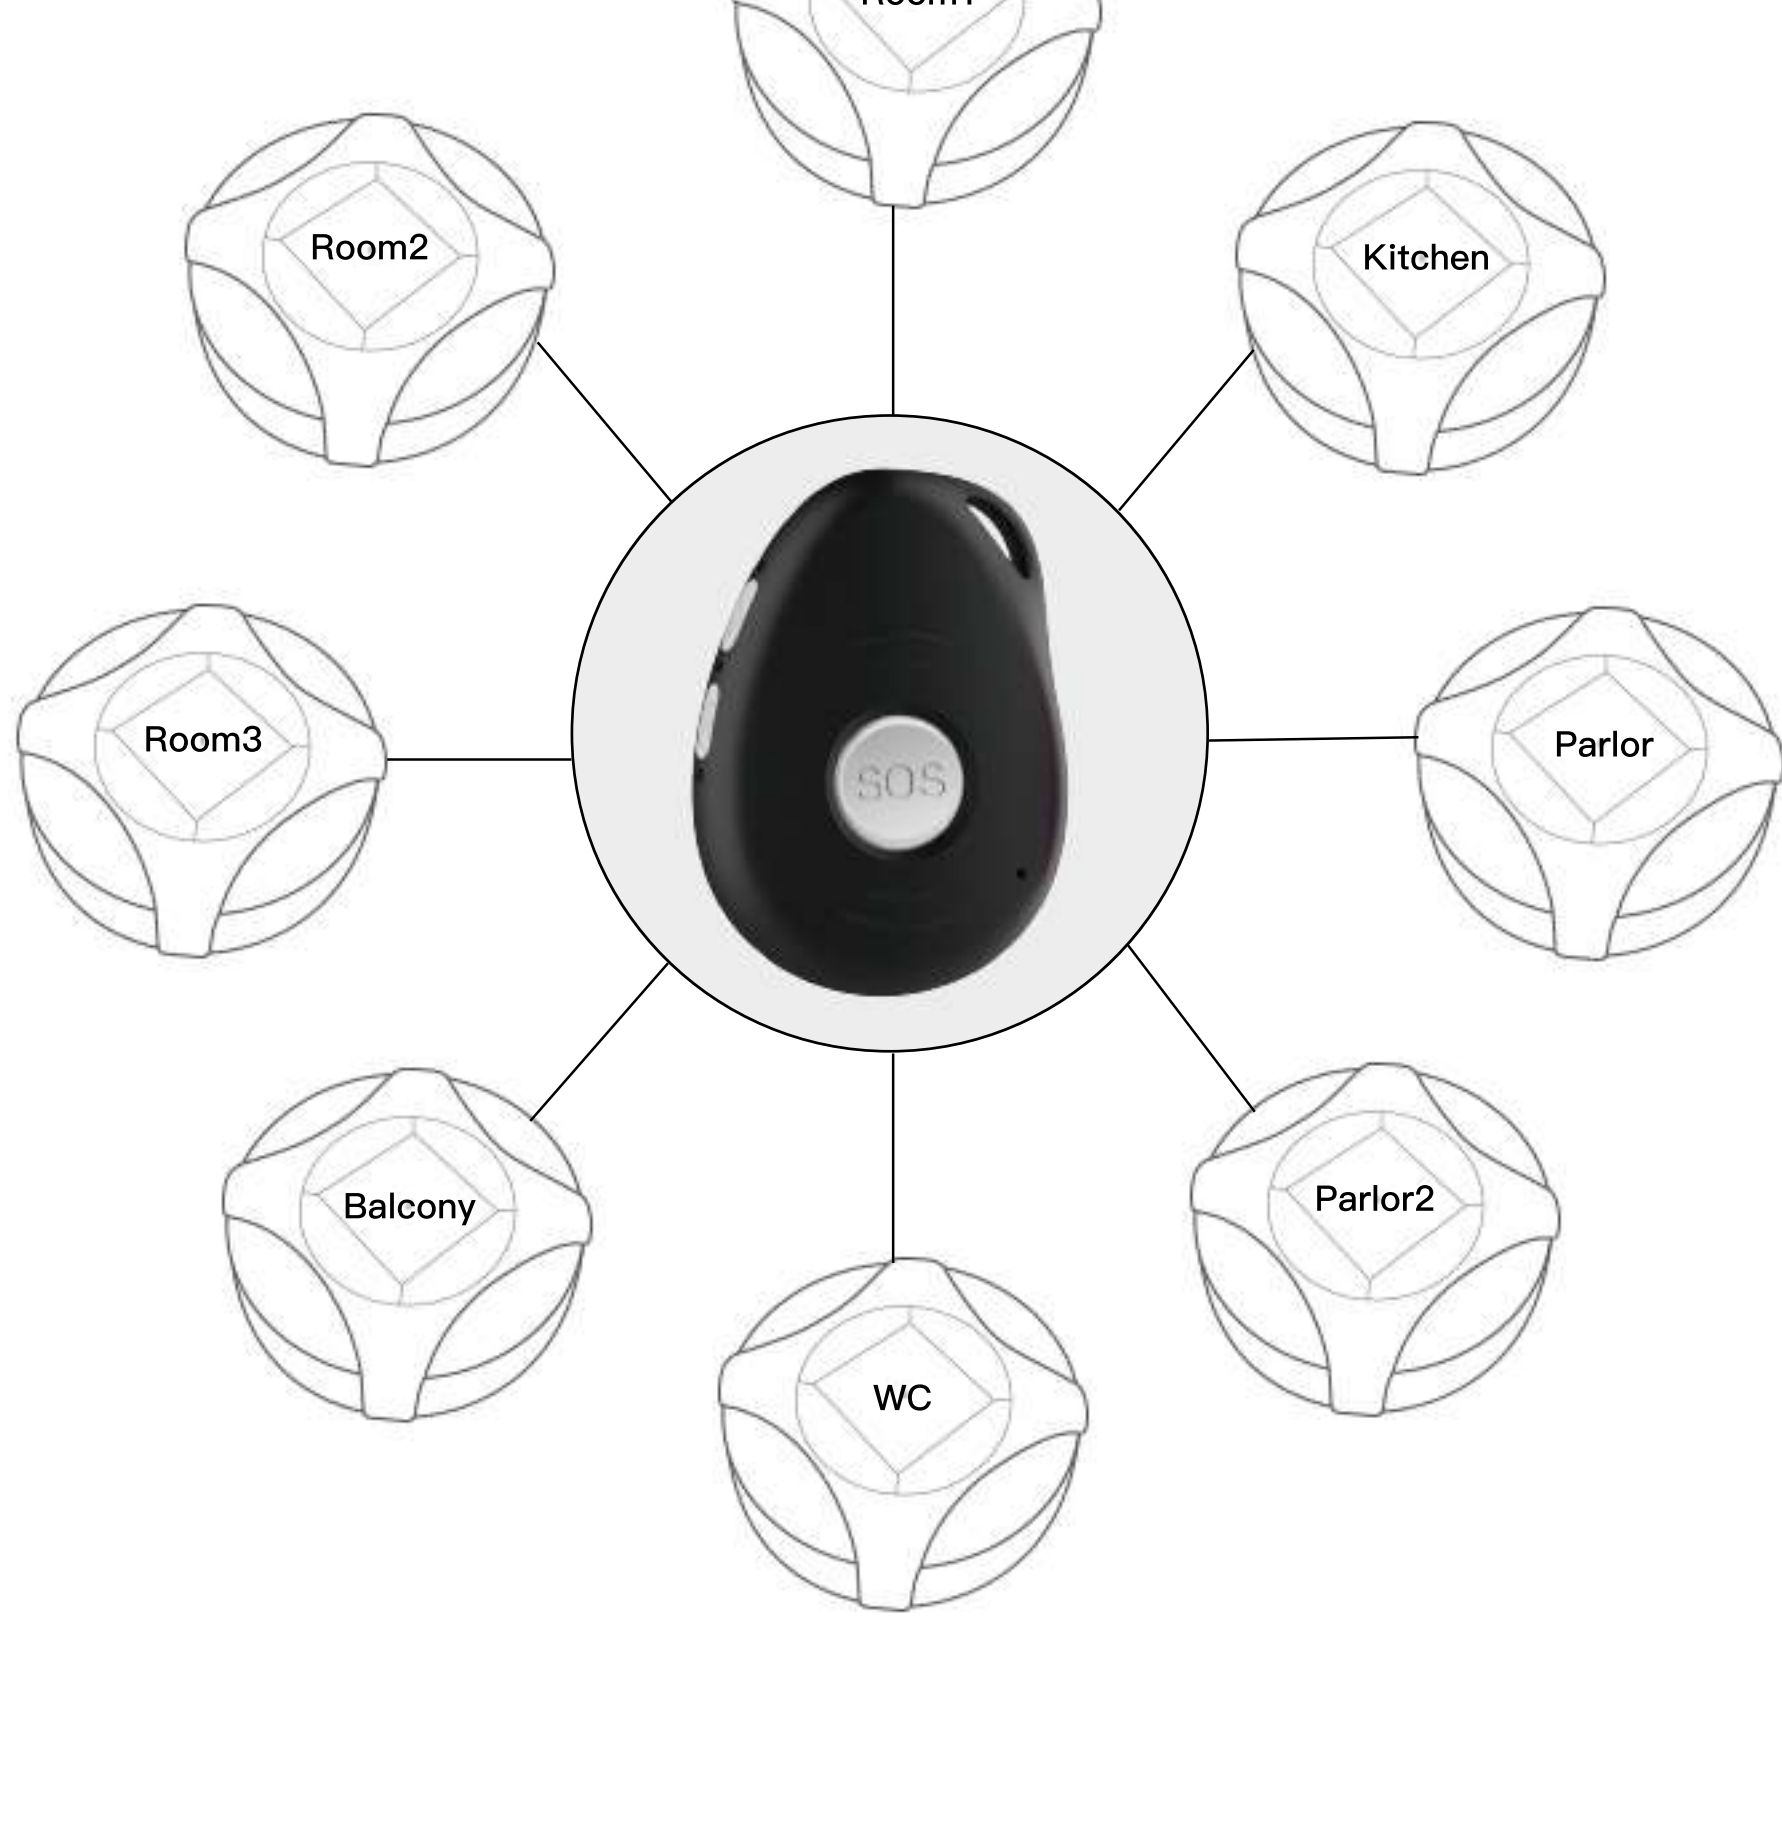

FEATURE

Removable AAA battery with 2-3 years life

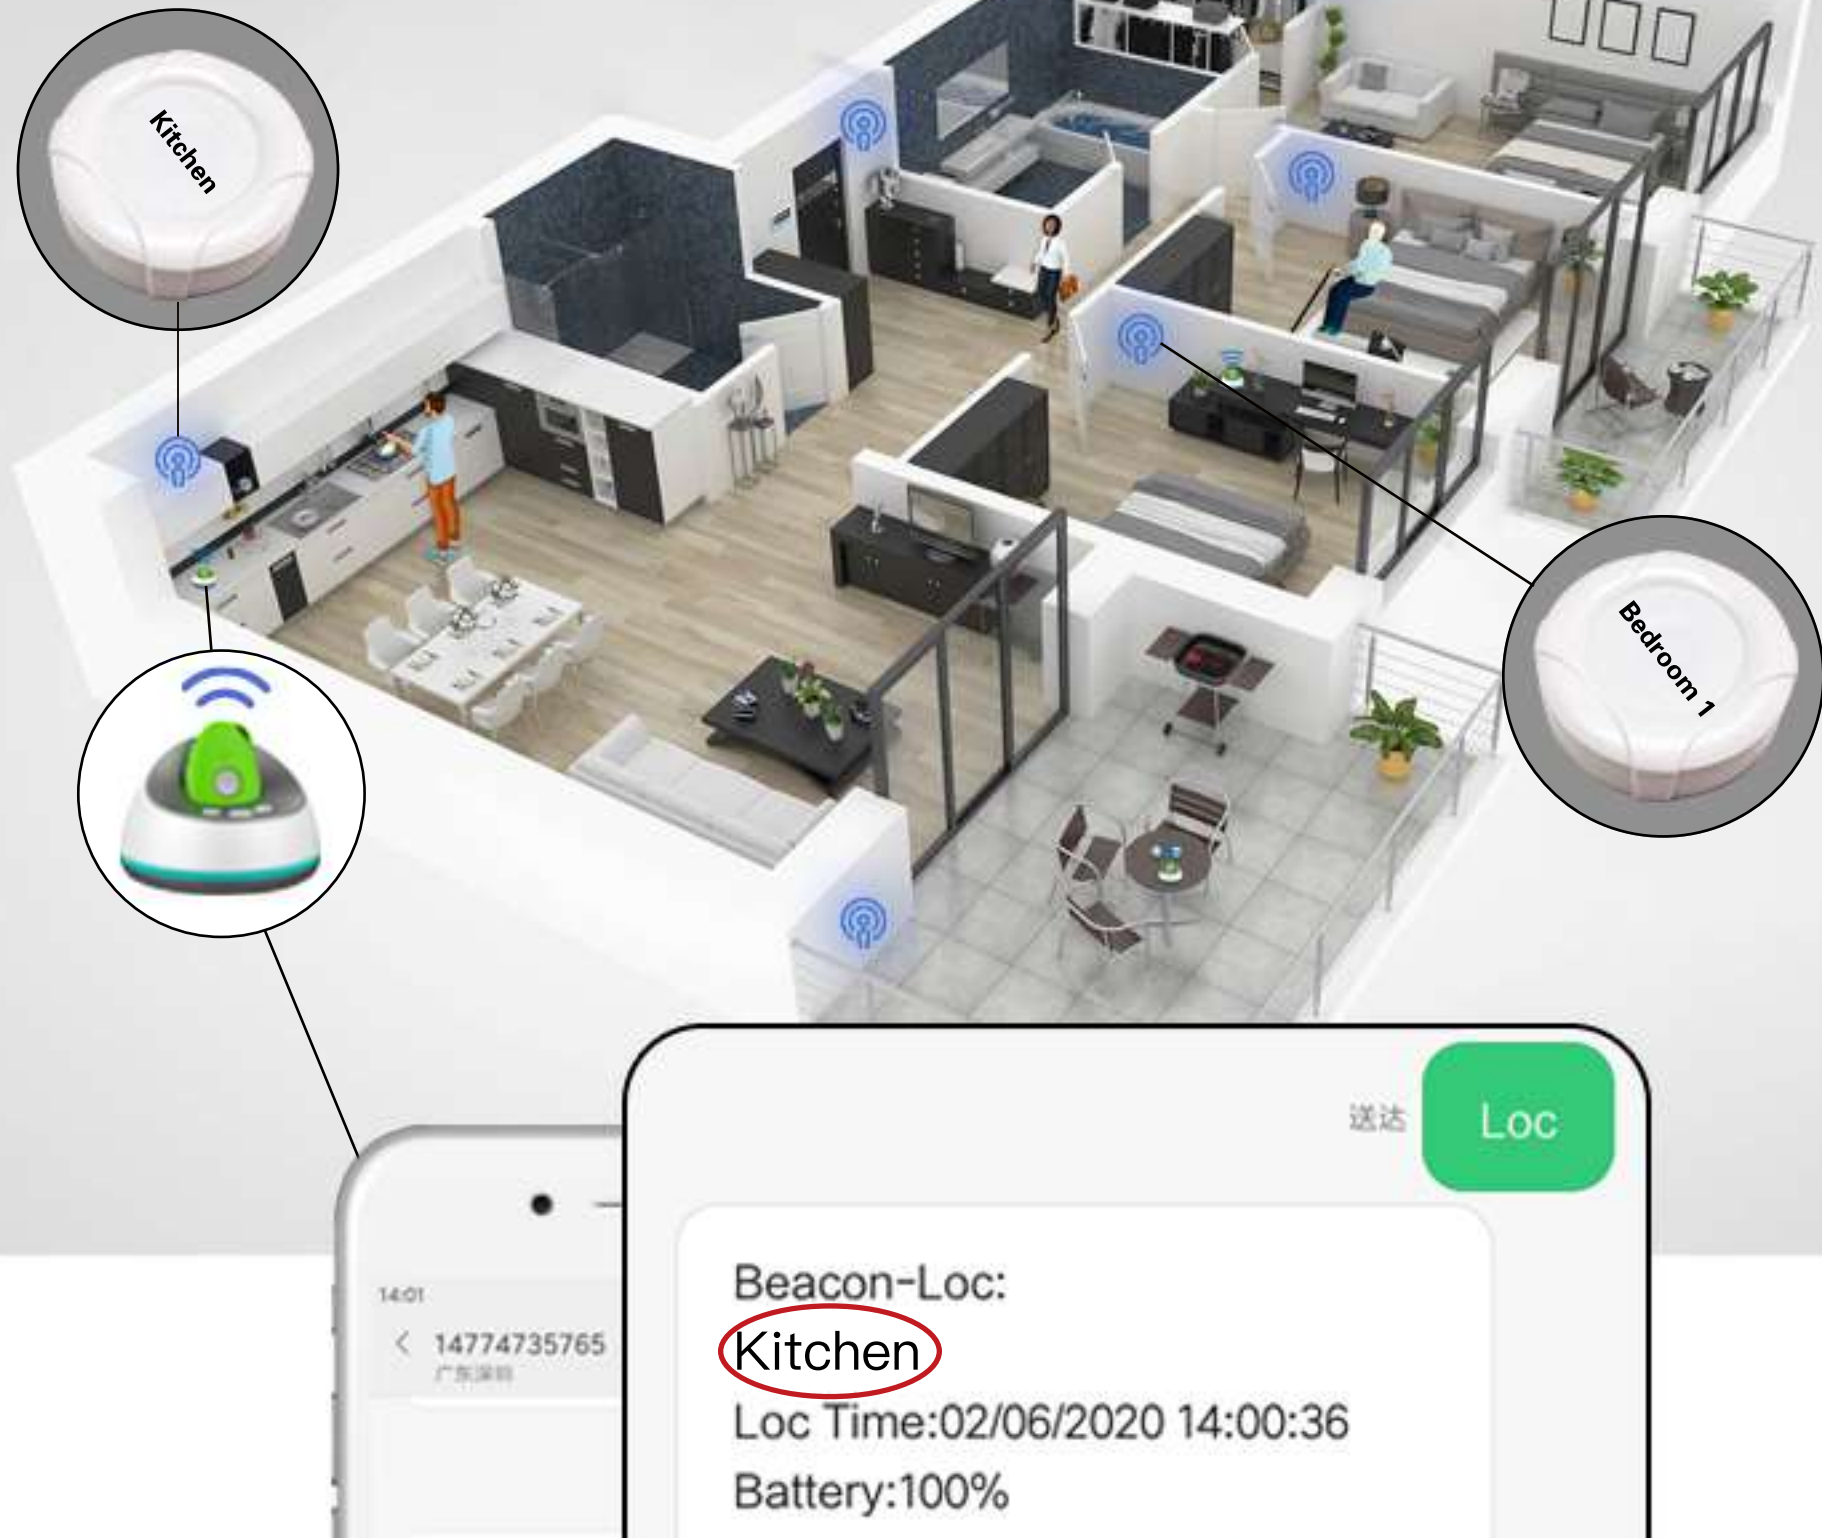

BLE 5.0

One device can scan at most 20 beacons around

USAGE SCENARIOS

Beacon-Loc: **Kitchen**
Loc Time:02/06/2020 14:00:36
Battery:100%

Our Beacon makes life smarter, and indoor positioning more refined. It allows your family or doctor to find the location of the elderly living alone more quickly and accurately.
